ODP 393-77
4 March 1977

MEMORANDUM FOR: Deputy Director for Administration

FROM : Clifford J. May, Jr.
Director of Data Processing

SUBJECT : ODP Report for Week Ending 4 March 1977

Communications Requirements

Office of Data Processing communications requirements
for FY 1979-1983 were forwarded to Office of Communications.

National Photographic Interpretation Center Request for
Coordination

Office of Data Processing received a request to coordinate
on the NPIC purchase of 114 Delta Data terminals.

Security Briefing

The ODP Security Officer attended a briefing given by
IBM on multi-level secure processing capability. IBM prepared
the briefing as a result of an RFP from the Air Force for the
SATIN/IV System. The system might contain some capabilities
that could be integrated into the SAFE System.

Support to Office of Strategic Research

FUSE - Manipulation of U.S. defense program expenditures
and order-of-battle data covering 17 year periods. The Five
Year Defense Plan for 1977 (FYDP77) tapes which were received
from the Department of Defense, have been processed to create STATINTL
input for the US/USSR defense expenditures comparison.

Support to Office of Finance

GAS - General Accounting System. A new daily job stream
has been initiated. This has reduced the elapsed time by
25% (4 hours to 3 hours) and has caused jobs to get in and
out of the system much quicker.

All General Ledger file discrepancies that existed at
time of conversion have been corrected.

We met with the Deputy Director of Finance and discussed
discrepancies in report figures. We know the scope of the
problem and have added resources to the GAS team to solve it
as soon as possible.

FRS - Financial Resource System. We continued our sup-
port of the FY-79 Program Budget exercise with the preparation
of Budget input menus and the beginning of on-line data entry
by Agency Budget Officers on 1 March as planned. Initial
reports for the Program exercise will be produced on 13 March.
Additional reports are planned for production as required,
with final reports scheduled for 9 May.

CAMS

The CAMS software release originally scheduled for
18 February was delivered on 3 March. CAMS will now fully
support SAFSS mission tasking.

SAFE

Progress on SAFE system development has been delayed by
the need to address issues and questions generated within
the Agency and Intelligence Community. However, two signi-
ficant events occurred this week that should get us moving
forward again.

First, during a meeting of the DDA, DDI, and DDS&T on
3 March, a decision was made to modify the SAFE development
approach. Rather than the SAFE Project Office in ODP acting
as system design and integration contractor, an outside con-
tractor will be selected competitively to do the job.

Second, a draft of the ADISS/SAFE Coordination Management
plan was completed. It is being circulated within DIA and CIA
for staff review and comments.

2

SADS

ODP personnel are attending the SADS monthly progress
meeting at ███████████████████████ California. The
office space layout for the ███ staff personnel who will be
located in the Ames Building was sent to ███ or their
review.

RAPID

During an inspection visit to the contractor's site
22-25 February, several sub-system design documents were
reviewed and modifications agreed to by Project Management.

The contractor was asked for a proposal dealing with
the implementation of the ███ ODP suggested solution to the
message integrity question. The proposal is expected
approximately 12 March 1977.

ADSTAR

We have completed the review of the ODO Requirements
Paper and have identified some minor differences that will
have to be reflected in the procurement document.

Training

A three day basic WM course was completed by 21 students.
